NAME

mbm_fmtvel – Extract sound velocity info from Hydrosweep data files and create output in tabular format.

VERSION

Version 5.0

SYNOPSIS

mbm_fmtvel [**–F***format* **–I***infilename*]

DESCRIPTION

mbm_fmtvel is a macro that scans a Hydrosweep swath sonar data file using the program **mbhsdump** and generates a list in columnar format with time, date, latitude, longitude, C-mean, and C-keel entrys. Comment records (lines) at the top of the output begin with '#'. The columns are tab-delimited. The only allowed formats are 21 (raw Hydrosweep data) and 24 (L-DEO in-house binary Hydrosweep data).

MB-SYSTEM AUTHORSHIP

David W. Caress
  Monterey Bay Aquarium Research Institute
Dale N. Chayes
  Center for Coastal and Ocean Mapping
  University of New Hampshire
Christian do Santos Ferreira
  MARUM - Center for Marine Environmental Sciences
  University of Bremen

ALSO CONTRIBUTED TO THIS PROGRAM

Suzanne H. O'Hara
  Lamont-Doherty Earth Observatory

OPTIONS

–F   *format*
        Sets the format for the input swath sonar data using **MBIO** integer format identifiers. The only allowed formats are 21 (raw Hydrosweep data) and 24 (L-DEO in-house binary Hydrosweep data).

–I   *infilename*
        Data file from which the input data will be read.
